What is F flute corrugated cardboard?

The F flute is the thinnest corrugated flute available, with a thickness of around 0.8 millimeters or 1/32 inch.

This means that a single linear foot of packaging has around 128 flutes. For several types of consumer goods, the F flute is appropriate for strong packaging.

You can see a basic diagram highlighting the fluting and liners below.

Type F corrugated sheets have an outstanding printing surface and excellent crush resistance.

This type's thin construction allows for stiffer boxes with less fiber. This type is commonly used to manufacture fast food clamshell containers and packaging for consumer goods such as burger box, coffee box, food tray.

To reduce plastic pollution, Sunkea is focusing on building an industrial system of **"substitute plastics with paper." Bamboo** is the world's fastest growing grass, which can recovery ecological balance quickly.Promote high-quality development of **"substitute plastics with bamboo"** and contribute to global sustainable development.

Bamboo is a member of the grass family.
It takes about three years to get established,
strong natural growth without artificial planting.

Bamboo is the world's fastest growing grass!

How fast does bamboo grow?

Bamboo Fiber Food Packaging

In modern times, bamboo has been turned into an eco-friendly alternative to plastic products, thus reducing the adverse impact of micro-plastics on the human body and facilitating green development. As a leading food packaging manufacturer in China, Sunkea provides a series of high-quality bamboo fiber containers such as takeaway deli boxes, salad bowls, noodle boxes, coffee cups, and lids of different sizes to meet your specific needs. Since bamboo fibers have a natural anti-bacterial property, so there is no need to add chemicals in manufacturing process.
